

## Samples from Students' Feedback

- I thought using the Wiki was such a good idea; it really did help me communicate with classmates and the instructors
- I feel more comfortable “composing” visual media on my own. The videos were fun to learn to make (and they also facilitated my learning process).
- The library sessions were really essential, because I learned how to use Cornell’s library database to its fullest extent. This resource is so powerful because I am linked to almost every authoritative book that is available. The class website was my “go-to” website for research. It conveniently has all the search bars, catalogs, and websites that I needed to find pictures, books, music, etc. for my projects.
- I learned that composing in new media is very closely related to writing. When compositing through digital multimedia, it was exactly like writing an essay but explaining my arguments through pictures, music, etc., rather than words.
- At first I was hesitant about it, but I really enjoyed and learned from the collaborative aspect of the class.
- I got very comfortable using the Wiki by the middle of the class. I really like the interactive nature and the user-friendliness of the Wiki- Very easy for me to upload and revise my work.
- Wiki was very useful tool in terms of class communication. Also, we could actually make a “collection” of the works we’ve done, so I was very proud of myself and my peers as I see the collection develop more throughout the semester.
- I have to say I loved the multimodal project. I am interested in photography, design, and video arts, so it was a great opportunity for me to actually create video presentations.
- It offered me a chance to think about the digital literacy I sometimes take for granted.
